

## 88-100 Removal and installation of front fender

---

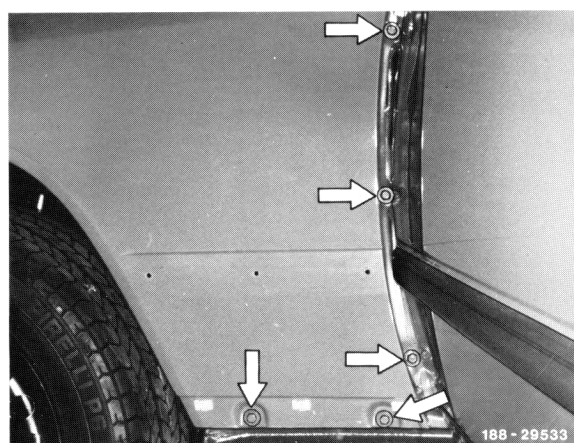

### Removal

---

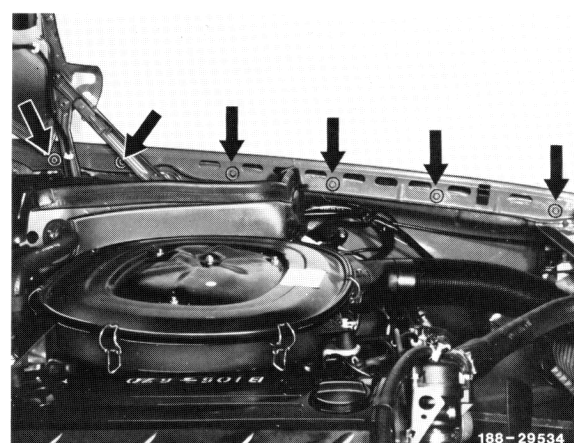

1 Force off trimstrips.

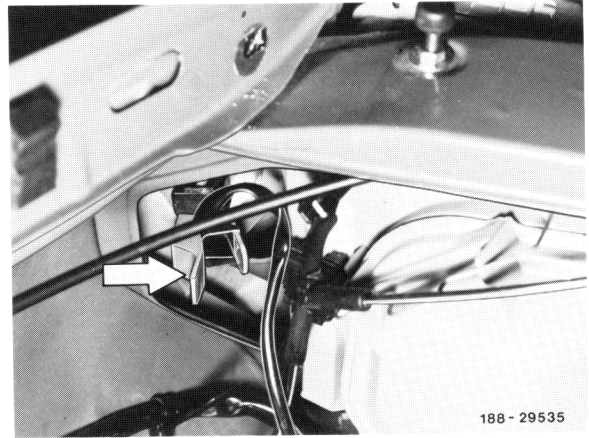

2 Remove screws on front wall pillar and on side member.

3 Remove screws on flange at top.

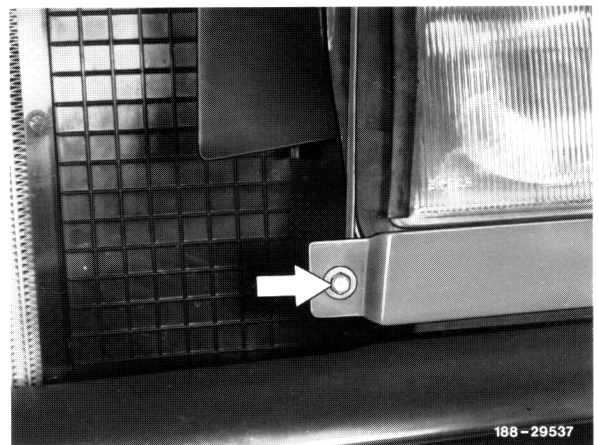

4 Push holding bracket of flasher lamp unit inwards, remove flasher lamp unit in forward direction and pull off plug connection.

5 Remove screws in cutout of flasher lamp unit.

6 Unscrew screw on molding and remove molding.

7 Unscrew screw at front.

8 Unscrew lateral screw on bumper.

9 Pull bumper laterally downward and unscrew lower screw.

10 Remove front fender forward in upward direction.

### Installation

11 Coat spare fender with MB permanent underfloor protection.

12 Check sealing rubber on inner fender for correct seat.

13 Mount front fender and fit.

14 For further installation proceed in reverse order.

15 Upon assembly of fender, preserve cavity above inner fender through opening in flasher lamp unit cutout with cavity wax.

**Note:** Mask openings on fender top (refer to item 3) prior to waxing and unmask again upon completion of waxing.
